# User Guide

Background:

"LinkedIn Students" app, aimed at helping soon-to-be college graduates search for jobs that could be a fit, network and relieve some of the major stress students can face hunting for their first job out of college. We describe the app as a job exploration guide. The tool offers personalized job recommendations and postings based on the user profile.

Details:

Feature 1.

| Resume and Profile Management (Tell me about yourself)	With this feature, the job seekers can automatically create a resume and apply for jobs directly.
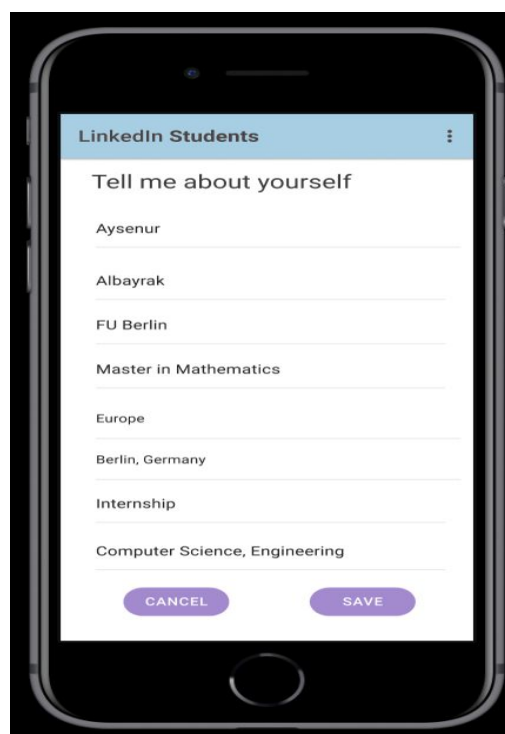

After successfully authenticating, the user is directed to the profile management screen.

It is a form which includes some personal and professional background questions. Users complete this process by giving answers to these questions.
Feature 2.

Job Recommendation Cards	Each job opportunity is designed in a cart which includes a detail button to forward to user job details. Cards also include position name, company and summary about role.
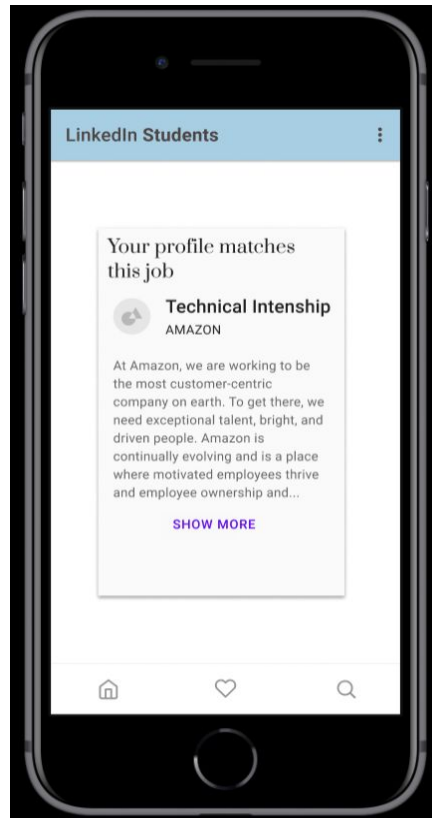

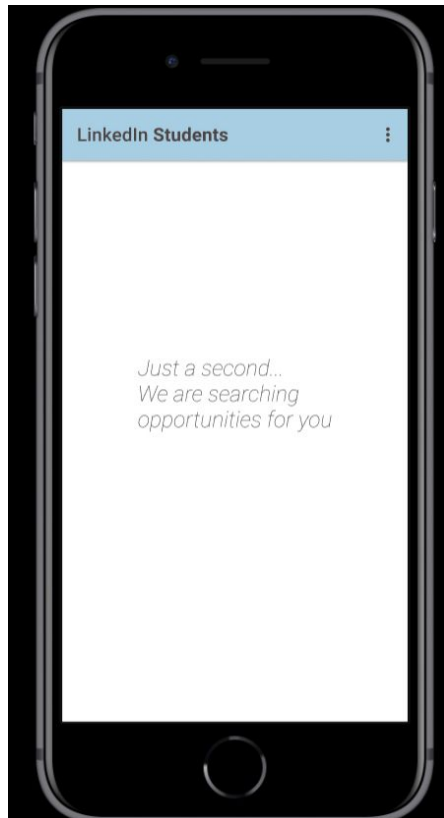

After the user completes the profile, the app provides tailored job-related recommendations. Instead of asking you to navigate multiple tabs, it displays the information in a card-like format through a series of options.
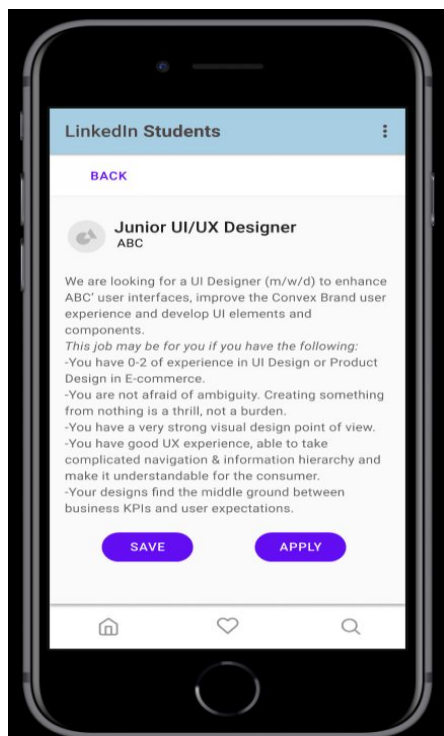

The user can examine these suggestions in detail with the show details button. Additionally, users can save the recommendation for later or complete the application quickly and easily with the apply button.

<u>Product Availability</u>

Our application will be available on various platforms such as Apple Store and Google Play Store.
